

TAKE BACK CONTROL:

Ease retail supply chain uncertainty through better integration

HOW RESILIENT IS YOUR SUPPLY CHAIN?

Supplier components come from different vendors and locations all over the world. At any given point in time you're working with countless moving parts. The line between efficiency and failure is paper-thin — susceptible to any disruption. This is especially true in retail businesses with tight margins — any break in your supply chain has the potential to be catastrophic.

Between economic uncertainty, weather disruptions, political instability, and transportation issues — you're always at the mercy of outside forces.

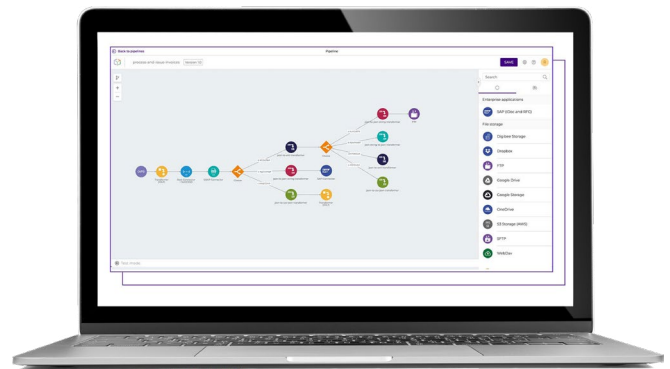

How can you proactively mitigate your supply chain risk — diminishing vulnerabilities that can negatively impact your revenue and brand?

BUILD DIGITALLY CONNECTED SUPPLY NETWORKS

Shoring up your technology is one place you can gain back control. Bolstering the resiliency of your supply chain requires that you redefine how you connect and collaborate across the ecosystem. A more distributed, coordinated, and trackable supply of components allows supply chain managers to anticipate and respond to unexpected changes.

The Digibee integration platform modernizes your operations quickly and cost-effectively. **This next-generation eiPaaS (Enterprise Integration Platform as a Service) offers end-to-end supplier integrations that unite supply chains and provide a holistic view of your entire ecosystem.** When you link the essential business segments of R&D, procurement and purchasing,

production, warehousing, and logistics in a flexible digital infrastructure — you create a smart supply chain that drives top-line revenue from sales and services, with less risk of disruption.

CREATE A SMART SUPPLY CHAIN

Digibee can help you transform your supply chain into a resilient, digitally connected ecosystem. Integration enables real-time, end-to-end visibility, flexibility, and scalability that:

- **Manages inventory levels in real time:** prevent losing money or customer dissatisfaction with better accuracy
- **Handles variability:** combats any disruptions to data flows in real-time, and will reflect the most current changes in demand and supply
- **Increases efficiency:** have your systems all working together automatically, reducing silos and manual processes
- **Mitigates supply risks:** by having visibility into your products and integrated vendor systems, you can mitigate risks by foreseeing challenges to come

UNLEASH DIGIBEE EXPERIENCES AT SCALE

The Digibee integration platform helps retailers quickly transform their integration architecture by enabling frictionless connectivity. It's founded on three key pillars:

01

Time to value

Our innovative solution allows delivery of pipelines to occur at unprecedented speeds. A low code, cloud native infrastructure dramatically expedites IT projects - reducing project backlogs and technical debt. Connect applications, processes, and people for faster time to market.

02

Reduced complexity

An easy to use platform enables your internal resources to build, run, monitor and repeat — freeing up time to focus on what matters: innovation and the growth of your business. Digibee creates flexible and fast connections to any data source, breaks down complexity of legacy technologies, and enables customizable solutions — transforming existing digital infrastructures.

03

Customer success

More than virtually any other industry, retail IT and development teams are pressed to do more with less resources. Reduce delivery risk and improve speed to implementation with Digibee's superior level of customer support. Dedicated delivery and customer success teams come built into your subscription with Digibee. We deliver **for you** first, **with you** second, and **empower you** lastly to implement any future integration with ease.

DIGIBEE'S SUCCESSFUL IMPLEMENTATIONS

The Digibee platform makes it easy to create new products and services, add or replace business partners, and improve integrations with customers and suppliers. Consider these success stories:

Global food retailer with 12,000+ stores

Implemented a modern WMS solution for the chain - enabling operational efficiency and reducing spend. The enterprise avoided a large technology restructuring project by choosing the Digibee eiPaaS for its integration.

Restaurant food-chain supplier with 70 facilities in 18 countries

Implemented its new "click and pick up" service and eCommerce delivery model in less than two weeks amid the Covid-19 pandemic.

International parcel delivery service

Integrated ERP with warehouse systems, bringing inventory control to real-time - monitored all data flow for orders, process automation, and visibility.

Supermarket chain with 50+ stores

Integrated its systems with eCommerce fulfillment companies in multiple marketplaces around the globe, facilitating faster onboarding of new partners and expedited data validation to speed up package deliveries.

Let us show you how Digibee's powerful integration solution can solve your complex integration challenges **quickly, at scale, and with confidence!**
